We highly recommend that APC UPS equipment is fully serviced at the same time as batteries are replaced. This will ensure that the equipment is operating to specification and that critical functions such as mains-battery transfer, inverter operation, spike/surge protection and battery charging are all operating as required. In addition we undertake re-calibration, firmware upgrades and a multitude of other equipment checks of the APC UPS equipment to ensure the reliable operation. We can undertake these services either at our workshop or at your site. Contact us on today on mail@itpower.co.nz or +64 9 415-5080.
